📍 Makassar, Indonesia · **Open to remote worldwide & relocation**

SUMMARY

Fullstack website and ERP developer with production experience building REST APIs (Node.js/NestJS), custom Odoo modules, and cloud-deployed applications on GCP. Shipped real-world systems in a fast-moving enterprise environment, from a donation platform processing IDR 12M+ across active campaigns, to an automated fleet document lifecycle system managing 100+ vehicles. Comfortable working remotely, communicating in English, and integrating into distributed teams across any timezone.

EXPERIENCE

ERP Developer Specialist

October 2025 – April 2026

PT Hadji Kalla · Makassar, Indonesia

- Developed and customized Odoo modules for enterprise business requirements across Kalla Group subsidiaries, supporting 100+ fleet vehicles in the Kalla Transportation & Logistics division
- Built backend system and REST APIs for Jejak Kebaikan, an internal donation platform that processed IDR 12M+ across 2 campaigns with 50+ active
- Automated fleet document lifecycle for Kalla Transportation & Logistics, covering 100+ vehicles — eliminated manual tracking and reduced document processing time
- Integrated Google Drive API (OAuth2) for document storage and implemented scheduling with retry mechanism for background tasks

Software Developer

April 2025 – June 2025

PT Telkom Indonesia Regional 5 · Makassar, Indonesia

- Built GenZ, an internal web platform (Laravel/PHP) for cross-departmental data centralization and real-time monitoring across modules including inventory, attendance, and activity log
- Detected and formally reported 20+ sensitive data leak incidents through systematic cyber patrol activities, creating a structured early-warning workflow
- Supported network infrastructure setup including device configuration and internal connectivity

PROJECTS

Jejak Kebaikan — Donation Platform | *Node.js · NestJS · REST API · MySQL*

- IDR 12M+ processed across 2 campaigns with 50+ active users since launch.
- Architected REST API backend covering donation creation, user authentication, campaign management, and transaction history with full audit trail.
- Implemented input validation, idempotency handling, and secure payment flow to ensure zero-error financial records.

Fleet Document Module | *Odoo · Python · PostgreSQL · Google Cloud*

- Automated the full document lifecycle for 100+ vehicles in Kalla Transportation & Logistics, replacing a manual tracking process.
- Integrated Google Drive API via OAuth2 for cloud document storage and retrieval directly within Odoo.
- Built a background scheduler with retry mechanism to handle document expiry alerts and renewals without manual intervention.

GenZ — Internal Dashboard & Monitoring | *PHP · Laravel · MySQL*

- Built a multi-module internal platform for PT Telkom's General Affairs department, consolidating inventory, attendance, correspondence, and activity logs into one interface.
- Designed role-based access control to ensure department-level data separation and system usability across teams.

Fridge Recipe — Ingredient-based recipes | *Node.js · ExpressJS · GCP (App Engine · Cloud Run · Cloud SQL)*

- Developed a REST API web application that recommends recipes based on available ingredients, deployed on GCP with App Engine, Cloud Run, and Cloud SQL.
- Designed scalable cloud architecture as part of a cross-functional team (Cloud, ML, Mobile) for a Bangkit Academy capstone project.

Smart Admission System | *Laravel · Bootstrap · MySQL*

- Built a web-based student admission system with automated scoring and ranking using the Simple Additive Weighting (SAW) decision method.
- Implemented online registration, criteria management, and an admin dashboard with result visualization for transparent admission decisions.

Apotek Jaya Information System | *Java · NetBeans · MySQL*

- Developed pharmacy management system covering inventory, transactions, and reporting — results published in a peer-reviewed academic journal.

SKILLS

Backend	:	Node.js, NestJS, Laravel, CodeIgniter, REST API, PHP, Python
ERP	:	Odoo (module dev, XML, Python), business workflow automation
Frontend	:	HTML, CSS, JavaScript, Bootstrap
Cloud	:	Google Cloud (App Engine, Cloud Run, Cloud SQL), AWS (fundamentals), Hostinger
Database	:	MySQL, PostgreSQL
Tools	:	Git, GitHub, Postman, VS Code, Linux

EDUCATION

STMIK Profesional Makassar

Bachelor of Information Systems · GPA: 3.82 / 4.00

Oct 2022 - Oct 2025

CERTIFICATIONS

Junior Web Developer (Certified) · BNSP — Indonesian National Professional Certification Board	2024
Google Cloud Engineer Learning Path · Dicoding × Google	2024
Back-End Development with Google Cloud · Dicoding × Google	2024
AWS Cloud Fundamentals & Generative AI · Dicoding × AWS	2024
Prompt Engineering for Software Developers · Dicoding	2026
Design Thinking · KEMNAKER / GNIK	2025
